

MFI-Forecaster

Portable and reproducible MFI measurements, additional SDI

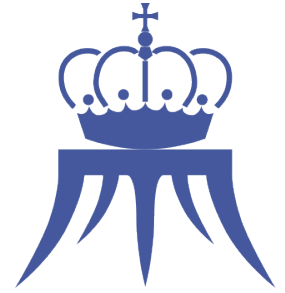

Benefits:

- reproducible measurements
- USB hub for data collection
- stand-alone
- clean testing
- automatic cleaning program
- time saving
- test data on screen
- easy to use
- data transmission optionally

Key features:

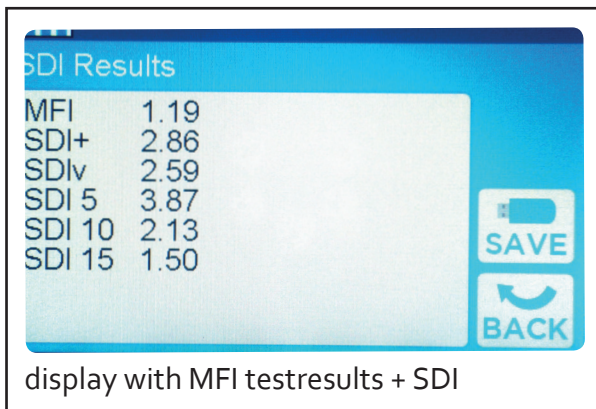

- compact and portable
- high quality build
- state-of-the-art European technology
- meeting the ASTM standards
- temperature correction
- constant pressure
- Measuring SDI and MFI in one test cycle

Why you should use the MFI-Forecaster:

Regular measuring MFI will lead to better determination of the fouling potential of feed water. This results in better system performance, less energy, less downtime, increased recovery and longer membrane lifetime.

display with MFI testresults + SDI

Filters compliant to ASTM standard
